Statement of Attestation

Fitness Passport engaged Bugcrowd Inc. to perform a Standard Pen Test of Fitness Passport's external facing assets. This document covers the testing period from November 26th, 2025 to December 16th, 2025.

Standard Pen Test is an on-demand methodology-driven penetration test that delivers real-time results and 24/7 reporting in support of a variety of compliance initiatives. A pay-per-project model powered by CrowdMatch technology enables Bugcrowd to draw from a global network of continuously vetted pentesters to deliver faster setup without compromising on skill or experience. To support accelerated remediation and streamline integrated business processes, vulnerabilities discovered during the methodology are viewable live in the Bugcrowd Customer Console as soon as they are submitted by the pentester. Bugcrowd's in-house team of Application Security Engineers works in parallel to validate, prioritize, and push streaming vulnerabilities through customer-chosen SDLC integrations like GitHub, Jira, or ServiceNow. The purpose of this program was to identify security vulnerabilities in the targets listed. Once identified, each vulnerability was rated for technical impact defined in the Findings Summary section of the report.

Results

This program received 8 unique submission(s) from various researchers. These issues ranged in scope and severity, with 1 critical issue(s) discovered during this timeframe.

The retesting of this program shows that 1 Critical severity vulnerability was no longer reproducible with the reported method. The remaining 2 Moderate and 5 Informational severity vulnerabilities were not requested for or did not pass the retesting process.

A breakdown of the findings is as follows:

Severity	Number of Findings
Critical	0
Severe	0
Moderate	2
Low	0
Informational	5

The above information represents a point-in-time snapshot of Fitness Passport's overall security posture as demonstrated by this Penetration Test.

About Bugcrowd, Inc.

Bugcrowd is the number one crowdsourced security platform, providing on-demand access to the largest global network of heavily vetted, intelligently matched, and expertly incentivized security experts. Our highly integrated platform-powered approach to security testing helps customers like Mastercard and Motorola surface more critical vulnerabilities without the cost or overhead of traditional solutions. More organizations trust Bugcrowd to help them stay one step ahead of attackers through the greatest range of fully-managed security testing programs including Bug Bounty, Pen Test, Vulnerability Disclosure, and Attack Surface Management.

Based in San Francisco, Bugcrowd is backed by Blackbird Ventures, Costanoa Ventures, Industry Ventures, Paladin Capital Group, Rally Ventures, Salesforce Ventures and, Triangle Peak Partners.
